

Metropolitan Airports Commission

TO: Planning, Development and Environment Committee

FROM: Angela Enroth, Senior Project Manager (612-713-7492)

SUBJECT: **Engineered Material Arresting Systems (EMAS) Procurement Advance Deposit**

DATE: August 28, 2024

FOR ACTION

Summary

The Runway 30L Engineered Material Arresting System (EMAS) has reached its life expectancy and requires replacement. In order to proceed with design work for the replacement and secure a timeline for manufacture, a deposit is required by the company that provides the block material. Staff is requesting the authority to issue a Purchase Order (PO) for that deposit.

This work is being implemented to assist in the safe maneuvering of aircraft while advancing the MAC's purpose to provide exceptional airport experiences, so Minnesota thrives.

Fiscal Impact

☐ No Impact ☐ Operating Budget ☒ CIP ☐ Other

The funds for the advance deposit to secure production in the amount of \$1,590,000.00 will come from the approved 2025 EMAS Replacement CIP project. The project is currently planned to be paid for with General Airport Revenue Bonds (GARBs) and Passenger Facility Charges (PCFs), although staff is investigating federal grant opportunities for both the material and the installation.

Action Requested

1. **Recommend that the full Commission authorize staff to enter into a sole source procurement with Runway Safe for the purchase, delivery and installation-oversight of EMAS materials;**
2. **Authorize staff to issue a Purchase Order to Runway Safe in the amount of \$1,590,000.00 to cover the cost of the advance deposit to guarantee the production schedule of the EMAS materials; and,**

3. Authorize the Executive Director/CEO or his designee to execute the necessary documents.

Background

Prior Related Actions

- (a) On December 18, 2023, the Commission approved the 2024-2030 CIP listing which included the work associated with the 2025 30L EMAS Replacement in the amount of \$19,000,000.00.

Applicable Legal Authority

- (a) MAC has broad powers under Minnesota Statutes section 473.608 to enter into contracts to accomplish its statutory mission.

Analysis

The EMAS bed at the end of Runway 30L has deteriorated and needs to be replaced. The Runway Safe EMAS bed is the only proprietary product approved by the FAA. Staff is requesting the authority to enter a contract directly with Runway Safe for the EMAS replacement materials as a sole source purchase order. A separate contract will be bid in 2025 for the installation of the blocks by a separate contractor but under the oversight of Runway Safe.

To guarantee the block material is available for the 2025 planned closure of the Runway 12R-30L (for scheduled airfield improvements), Runway Safe is requesting an advance deposit to secure a production slot to move the production of the blocks forward on MAC's requested timeline.
